Phase II Activation of the Heat Contingency Plan

Phase II of the Heat Contingency Plan is activated as of Friday, 09/01/17 due to forecasts of dangerous and excessive heat.

A State Agency Partner and Stakeholder conference call was conducted on 09/01/17 to provide a briefing on the heat event which continues to impact most of the state according to National Weather Service.

Per the National Weather Service (NWS):

- An Excessive Heat Warning has been extended through Monday over much of the State.
- In addition to the Excessive Heat Warnings precipitation from Tropical Storm Lidia will impact Southern California on 09/03/17 and then will move into Northern California early next week.
- Heat stress possible for livestock with limited relief from the heat overnight.
- Area waterways are running very cold and fast, increasing risk for hypothermia and water rescues.
- Phase II actions of the California Heat Contingency Plan will be reassessed on Monday, 09/04/17.
- San Francisco Department of Emergency Management has activated their EOC in support of Heat Medical Surge activities. A Cal OES Coastal Region ESC responded to the EOC.
- Please see attached Heat Brief.
- Cal OES has created a page listing Summer Heat Resources including a map of cooling centers around the state, see link below.

<http://www.caloes.ca.gov/ICESite/Pages/Summer-Heat-Resources.aspx>

SITUATION SUMMARY

Cal ISO

- Per the ISO Emergency Response Coordinator (ERC), ISO does not anticipate having any issues meeting demand during the heat event.
- Consumers are urged to conserve electricity especially during the afternoon when air conditioners typically are at peak use. Consumers can help avoid power interruptions by turning off all unnecessary lights, using major appliances before 1300 hours and after 2200 hours, and setting air conditioners to 78 degrees or higher.
- Persistent hot temperatures and tight supply can strain the power grid, as air conditioner use increases.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Very Dry and Very Hot and Poor Overnight RH Recovery Continues At Least Two More Days. Some Areas with NE to E overnight Winds Tonight into Monday. High Risk of Significant Fire Potential developing due to anticipated thunderstorms this week. Strong high pressure will continue to be over the North Ops region today. Temperatures will be a few degrees cooler today but still well above normal throughout the region in general. Afternoon low RH will remain at 8-14% for most areas, and overnight recoveries will be poor to moderate at only to 20-30% in the driest locations and mostly below 55% outside of those areas. Some overnight NE to E/offshore wind will develop in the NW areas to cause fairly widespread low RH there tonight and early Monday.

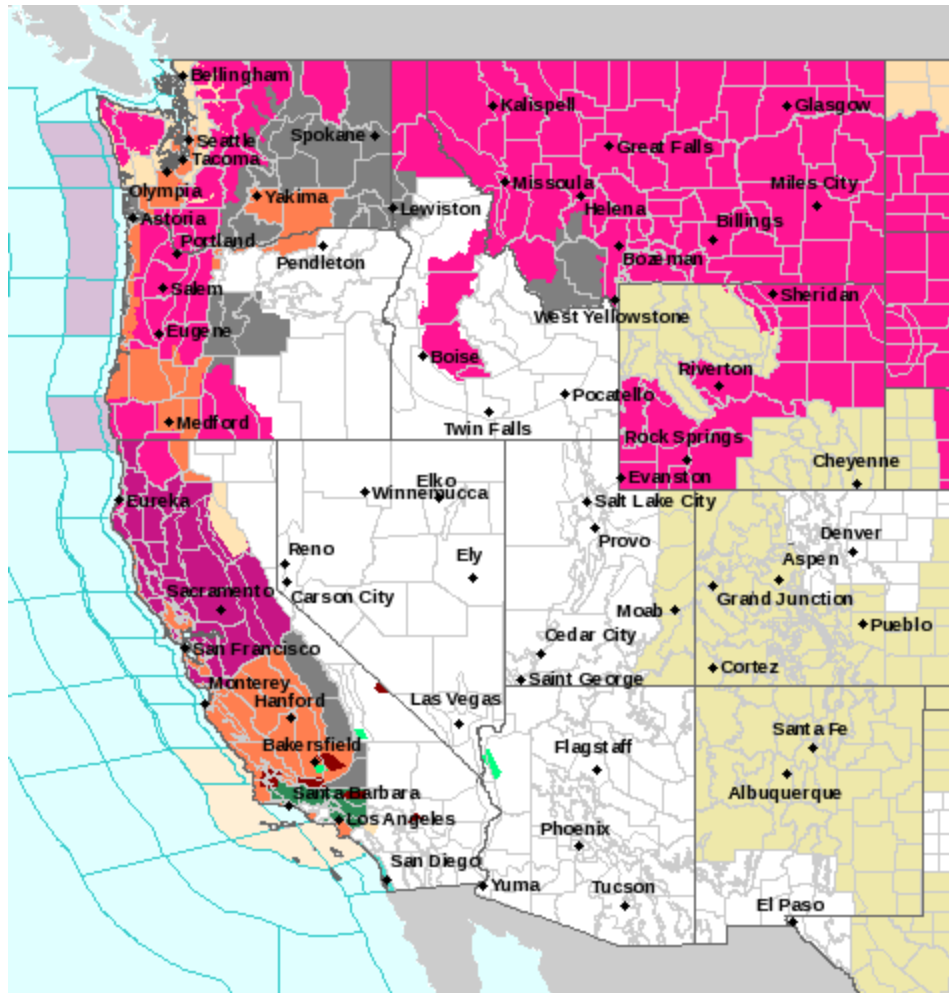

The high will gradually lose its influence on the North Ops region this week as the remains of Tropical Storm Lidia moves north just off shore. Moisture will begin to increase as early as today and conditions will become more unstable. This will lead to a few days of possible isolated thunderstorm development or even some light showers at times this week. The timing and location of these events is still uncertain, but High Risk of Significant Fire Potential is in place for most PSA's based on current knowledge regarding thunderstorms for Mon-Wed, including some potential for nocturnal storms and in spite of the expectation that some of the storms will be rather wet. High Risk designations may need to be extended after Wednesday for some PSA's depending on how things begin to develop. In the mean time, there is a small chance of some very isolated afternoon and evening mountain thunderstorms today in the north and east as well.

Temperatures will be substantially cooling this week to reach near normal values for the latter half. Overall relatively poor smoke dispersion with poor air quality in canyons and valleys near and downwind of active fires will continue in spite of the more active weather pattern this week, but there should still be some improvement for many areas. The marine layer will be very shallow and only areas along the immediate coast will get relief from the heat.

SOUTHERN CALIFORNIA

Isolated to scattered thunderstorms through the end of this week. Gusty east winds across Southern California through this evening. Isolated to scattered showers and thunderstorms will form mainly over the mountains and deserts through the end of this week as high pressure remains centered over the Great Basin and weak low pressure sits off the California Coast. However, there will be some shower and thunderstorm activity across the coastal and valley areas through Monday evening due to moisture from the remnants of Tropical Storm Lidia. Temperatures will still be hot across the valleys of Central California today, with temperatures between 100 and 110. Otherwise, temperatures will be near normal this week, with upper 70s and 80s across the mountains and upper 80s and 90s in the valleys. Minimum humidity will be above 20% across the region through the end of this week. East winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California through this evening, but across San Diego County east winds will be 20 to 30 mph with gusts to 50 mph. Winds will be light during the rest of the forecast period, except there will be strong and erratic winds with any thunderstorm.
